---

This pamphlet implements AFPD 21-1, *Managing Aerospace Equipment Maintenance*, and provides a description of CAMS for Mobility (G081) programs to supervisors, managers and workers. Specific details and instructions can be obtained from G081 help program 9051. It is recommended for use by bases that use the data system, G081.

### CAMS FOR MOBILITY (G081)

G081 is the automated maintenance management information system for most AMC aircraft. Each G081 base provides specific data on TCTOs, AFI 21-103 (*Equipment Inventory, Status, and Utilization Reporting*) status, MDC, aircraft discrepancies, supply parts status, personnel availability, training, and production control parts tracking. Reports and history listings based on real-time updates are available in a multitude of formats from terminals located throughout each maintenance complex. Access to the Central Data Bank (CDB) located at Tinker AFB, Oklahoma, is available to bases, Numbered Air Forces, HQ AMC, Air Force Reserve Command, Air National Guard, prime depots and Lockheed Aircraft Company.

MADARS/GPS involves the C-5 on-board recording of Aircraft Structural Integrity Program (ASIP) data, engine health data, and the transmission of the data to the CDB for processing. Once processing of the data is complete, programs available through the CDB extract analysis reports as required.

Programs are listed in this pamphlet, section 1, in numerical sequence. To find a program for a given subject, refer to the KWIC index Programs, section 2.

Batch (background) programs are designated as 67XXX series. To access batch programs use program 9058. The 8XXX series are real-time output programs and the 9XXX are real-time input programs.

To use any 8XXX/9XXX program type /FOR F???? then press ENTER (???? is the program number you wish to access).

To use any 67XXX program, contact your G081 manager and have it set up for you to use.

To use the G081 screen menu, press the PF2 key from any screen. If you press PF2 on a blank screen, you will need to press it a second time. This is only true if you are starting at a blank screen.

To get instructions on any G081 program type/FOR F9051 and press ENTER. After the format displays on the terminal, tab to the program number, type the 4 position program number and press ENTER. For 67xxx series programs, do not use the 6 just the last 4 positions.

Acronym	Definition
A/C	aircraft
ABEND	abnormal end (program fails before completion)
ACFT	aircraft
ACMS	advanced configuration management system
AGE	aerospace ground equipment
ALC	air logistics center
AMDAHL	an IBM compatible computer system
APU	auxiliary power unit
AT	action taken
BCOM	basic computer microfilm program
CANN	Cannibalization
CCMS	configuration control management system
CDB	central data bank
CEI	component end item
CODN	component operational data notice
CSD	constant speed drive
CTK	composite tool kit
DFE	data formatting equipment section
DFM	due-in for maintenance
DIT	due-in transfer transaction
DMC	defense mega-center
DOR	due out release transaction
DOR	due out release
EDJC	estimated date job completion
ERRC	expendability recoverability reparability code
ETIC	estimated time in commission
ETJC	estimated time job completion
FMC	fully mission capable

Acronym	Definition
FSC	federal stock class
FSN	federal stock number
FSPL	flight segment parameter list
G081	data system designator for the cams for mobility system
GPS	ground processing system
GTC	gas turbine compressor
H/M	how malfunctioned
HOW MAL	how malfunction code
HSC	home station check
ICMS	item configuration management system
IM	item manager
IMS	information management system
ISO	isochronal inspection
ISPF	interactive system productivity facility
ISU	Issue transaction
JCL	Job control language
JCN	job control number
KPT	kits parts tools
KWIC	key word in context
LRU	line replaceable unit
LTERM	logical terminal
MADARS	malfunction detection analysis and recording subsystem (C-005)
MAIRS	military air integrated reporting system
MASIIS	maintenance analysis and structural integrity information system
MDC	maintenance data collection
MDR	maintenance data reorder
MDS	mission design series or model design series
MESA	mechanized engine status accounting system
MESL	minimum equipment subsystem listing
MICAP	mission capable part
MLRU	madars-monitored line replaceable unit
MMN	madars message number
MOC	maintenance operational check
MTBA	mean time between actions
MTBF	mean time between failures

Acronym	Definition
MTBR	mean time between repair
MTM	modification tracking model
NBFA	normal back fill average
NDI	non-destructive inspection
NHA	next higher assembly
NMC	not mission capable
NMCB	not mission capable both (maintenance and supply)
NMCM	not mission capable maintenance
NMCS	not mission capable supply
NRTS	not reparable this station
NSN	national stock number
OAP	oil analysis program
ORMET	operational reliability maintainability evaluation team
PDM	programmed depot maintenance
PMCB	partially mission capable both (maintenance and supply)
PMCM	partially mission capable maintenance
PMCS	partially mission capable supply
PSB	program specification block
QLIST	quick reference list (quickie list)
QPA	quantity per aircraft
QRL	quick reference list
REFDES	reference designator (C017)
RJE	remote job entry
S/N	serial number
SAR	signal acquisition remote
SBSS	standard base supply system
SERID	serial number or id number
SERNUM	serial number
SICR	serialized item configuration record
SLRP	structural life reliability program
TCI	time change item
TCTO	time compliance technical orders
TDAM	trend data advisory message
TDEC	trend data evaluation center
TDSC	tinker data services center (g081 mainframe is located here)

Acronym	Definition
TIT	turbine inlet temperature
TMDE	test measurement and diagnostic equipment
TNB	tail number bin
TP	transaction processing
TRIC	transaction identification code
TRN	turnaround
TSO	time since overhaul
TSR	time specialist required
UJC	urgency justification code
VDT	video display terminal
VGH	vertical-gravity-height
VIRP	variable information retrieval program (G081 version of QLP)
VTOC	volume table of contents
WC	work center
WRM	war readiness material
WSC	weapons system controller
WUC	work unit code

Program Number	Title	Detailed Description
67001	Aircraft Departures (Delayed or On-Time)	Provides a listing of all aircraft departures. Option exists to select only those aircraft which departed on-time or late. Use on-line program 9070 to update.
67002	SE Material Control Report	Provides a report of open supply for SE by base, ID number or work center.
67004	Workload Distribution	Program computes job averages for WUCs using MDC data.
67010	Highest Work Unit Code	Lists up to 99 of the highest failing WUCs.
67014	Aircraft Work Center Conversion	Converts old shop mnemonic to a new shop mnemonic and numeric in the aircraft discrepancy records. (G081 manager use only)
67015	Engine Removals or Shutdowns	Lists selected engine removals or shutdowns.
67016	Status of Aircraft For a Given Base	Lists general aircraft and engine information.
67018	Base & Depot-Level TCTO Report, Engine and/or Components	Gives TCTO number sequence showing engine and/or component serial number applicability for the designated base.

Program Number	Title	Detailed Description
67019	ICMS Configuration Index	Lists serially-controlled items in item CEI and serial number sequence for those item CEI numbers requested.
67021	Aircraft Possessed Hour Distribution	Lists the aircraft possessed hour utilization summary and top 25 WUCs causing NMCM or NMCS, NMCB or PMCB, PMCM or PMCS conditions or a given aircraft, a selected group of aircraft, a base or command.
67022	SBSS / G081 Reconciliation Program Report	Provides a report using a data file FTP'd from SBSS and compares the data in that file to G081. This report produces an error list which supply & maintenance need to correct.
67023	Open Maintenance Discrepancies Listing	Lists all discrepancies and supply records by JCN for a given aircraft by base or WSC.
67024	Work Unit Code Updates	Provides system program managers the capability to add/change, delete or merge aircraft WUCs. (HQ/AMC or Programmer use only)
67025	Monthly Aircraft Status Summary	Displays aircraft status information for a selected date range and for each of the 11 months prior to the selected month. This is the batch version of 9025. This program will also select utilization data.
67026	NRTS Actions Summary	Produces a NRTS detailed report and NRTS action summary report from selected MDC records.
67028	Material Control Report	Provides a report in an array of sorted sequences of open supply data for an aircraft, base, or by requested UJC.
67029	Personnel Availability File Maintenance	Adds and deletes records to the personnel availability database. (G081 manager or Programmer use only)
67030	Input of Oil Analysis Program (OAP) Data	Permits input of OAP data for storage in the CDB. Data is input from each base using G081 for OAP data.
67031	Batch Job Reports (9029/9029A Information)	Provides a various number of reports extracted from the batch program (M383) database. This program is primarily used by base level G081 managers.
67033	SE Discrepancy Listing	Lists all open or closed discrepancies to include the most current supply status for support equipment and in shop engines.
67034	Flying Hour Data Audit List	Lists flying hour data for any selected dates within past year. Will automatically select any newly input flying time records or a date range may be selected.
67035	Flying-Hour Report	Lists flying hours for the past year by base or by command.

Program Number	Title	Detailed Description
67037	MDC Work Summary Reports	Produces a work summary or activity identifier MDC report. Report includes SRD, ID number, type maintenance, total hours by work center.
67038	Cannibalization Data Summary by WUC for a Base or for Fleet	Lists all cannibalization actions (open and closed) summarized by WUC and national stock number.
67039	Training Course Utility Program	Provides the capability to add or delete training course codes for a given base or shop. This utility program can be very dangerous (mass delete records) if used improperly. Allows training records to be added/deleted based upon a specific AFSC.
67041	User-ID Listing	Provides a report of user-ids along with the data from the F9057 program. Report has several sort options.
67042	Off-Base Parts Requisition Status Report	Lists open off-base parts requisitions by aircraft or base. This program is a batch version of 8044.
67044	WUC MDC MTBF Analysis Report	This program extracts data for a given month from the MDC database and sorts the output by WUC. This report is the same as the 67136 report, except this one extracts "on-line" data.
67046	Aircraft/Engine TCTO Status Report	Provides a quick reference TCTO status for a given aircraft and installed engines. (The output from this program is included in the aircraft flying forms.)
67047	Base Aircraft TCTO Report	Lists aircraft TCTO status by base. No retired TCTOs are reported.
67051	MADARS Message Number Master File Listing	Lists the LRU message numbers, affected WUC, and narrative of the complete message file.
67054	Serially-Controlled Item Index	Lists master part number file of all records which are serially controlled. Various select and sort options are available.
67055	Dash 6 Report (C130)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67057	Aircraft Operational Status Conditions at All Bases	Lists all aircraft and their status conditions along with number possessed and deployed. This is the batch version of 8029.
67060	SRD-MDS Master Update	Add, delete, and change Master File. (HQ AMC or Programmer use only).

Program Number	Title	Detailed Description
67061	Maintenance Discrepancy Listing (Automated AFTO Forms 781A/K	Lists all the open maintenance discrepancies against one or more aircraft, to include the most current supply status. Use program 9032 or 9032F to request reports from this program. (The output from this program is included in the aircraft flying forms.)
67063	Units and Labor Actions	Provides report of actions taken, indirect labor, or direct labor depending on option selected.
67065	High 25 Failures and Labor-hours	Listing of the WUCs (top 25 total in labor-hours and/or failures) sequence.
67066	Maintenance Summary by System	Provides a major subsystem summary to include the total actions, removals, and the mean time calculation for each subsystem. This program is similar to the on-line 9041.
67068	Aircraft Status Report by WUC	Produces an aircraft status report by WUC with several different sort options available.
67069	Personnel Alpha Roster	Provides a list of all employees by shop, rank, shift, and squadron. Many different select and sort options are available.
67072	Logistics Composite Model	Provides output data in a file for the manpower folks. Report is utilized by HQ AMC/XPM.
67076	Aircraft Fix and Break Rate Report	Produces an aircraft fix and break rate report. Also lists number of breaks by Work Unit Code.
67080	529 Deficiency Report	Produces a report on 529s that are pending, approved for work, or completed during the reporting cycle. Various select options are available.
67081	Serially Controlled Component Report	Lists all serially-controlled components installed on an aircraft. Will also provide a list of "holes" on an aircraft. Another option will list all components with a given CEI code.
67082	TCTO Percent Completion Rates	Provides a report showing number of aircraft complete and the number of aircraft incomplete.
67083	TCTO Status Report	Provides status information on up to 18 TCTOs.
67087	Automated AF Form 2430, Specialist Dispatch Control Log, by Work Center	Lists all the open discrepancies against each aircraft in work center/aircraft sequence. (Use 9032B to request). This is the batch version of 8069.
67089	Repeat/Recurring Discrepancies	Provides a report showing the repeat/recurring discrepancies. (Use 9032C for base report or 8070 to access data for one aircraft.) (The output from this program is included in the aircraft flying forms.)

Program Number	Title	Detailed Description
67092	Dash 6 Report (KC010)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67094	Training Reports	Provides training subsystem batch output products. There are numerous different reports available. This program must be run via program 9032T unless it is scheduled to automatically run via 9029A.
67095	Hot Seat or Zone Report	Selects flagged aircraft discrepancy records and produces a report in a number of different sort and appearance options.
67096	Base/Fleet Cycle Report	Produces a listing of all assigned engines for a base/fleet in either remaining cycles/starts sequence or engine serial number sequence.
67097	Night Train	This program is normally run automatically for every base at midnight (base local time). This program closes out the previous day status records and initializes the new day.
67099	Automated AFTO Form 781J, Aerospace Vehicle-Engine Flight Document	Lists the daily flying hour data. Searches the database, looks at the 30 most recent days and prints the 10 most recent sorties. (Use 9032G to request) (The output from this program is included in the aircraft flying forms.)
67102	Component Re-Serialization	Changes the serial number of any component except an engine, APU, or the aircraft itself. (Restricted to Programmers and Kelly AFBs.)
67108	TCTO File Listing	Provides a listing by TCTO number, of all TCTOs at a given base which have not been retired.
67109	Serially-Controlled Item Inventory List	Lists the serviceability status, base location, next higher assembly, end article, date of last removal, how malfunction, and action taken for selected serially-controlled items.
67110	Discrepancy Search and Print Program	Provides the LRU analyst with a flexible search and print program for open and closed discrepancies. Many select and print options are available.
67112	Operational Status of a Given MDS	Provides various listings of the operational status of the fleet.

Program Number	Title	Detailed Description
67115	Maintenance Discrepancy List for Job Control Planning	Provides an automated listing of open discrepancies for a requested aircraft serial number or base. (Use 9032D to request.)
67117	Current Aircraft Status Report	Provides a listing by base or command for all aircraft indicating tail number, status ETIC, block-in, scheduled mission and remarks.
67119	Dash 6 Report (C017)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67125	Engine Status Report	Provides an eight-part engine/APU status report.
67126	Monthly MDC Transaction History	Allows selection of detail MDC data by base, aircraft, engine, APU, or all.
67127	TCTO History Listing	Provides a listing of all TCTOs, open and completed, against a given aircraft. Report contains the same information as output from program 8027.
67129	WUC Removal and Failure Summary	Prints a 6-month summary showing installed operating time, number of maintenance actions, MTBA, number of failures, MTBF, number of removals, and MTBR for a system or WUC.
67130	TCTO Expiration Status Report	Lists TCTOs that are expired or will expire within 180 days. Available by base for all aircraft.
67132	SBSS Error Report	Produces a reject report for the base entered. This is a list of all the rejects from the SBSS system. It is a tool to be used by management to help educate their users.
67136	WUC MDC MTBF Analysis Report	Reads a disk data set of summarized data built from MDC history tapes and produces a report by WUC. (Users must first contact their G081 manager to ensure the correct data file is active for the particular date request, for the monthly option only). Use 67044 for current/on-line data.
67137	Discrepancies Opened/Closed Previous Day	Lists discrepancies created and/or closed for the previous day.
67138	Open Supply for Completed Jobs	Produces a report showing discrepancies which could not be closed with open supply items on order.
67140	AFTO 95 History Retire & Delete	Provides a way to move history on an overhauled item from the active database to tape & then delete from the active database.

Program Number	Title	Detailed Description
67142	Discrepancies Closed with no MDC	Lists the discrepancies by shop or work center for a given base, in which the discrepancies are closed but no MDC has been input. Program is restricted to off-peak hours only. Program 8063 should be used daily at the end of each shift. This program should be run weekly.
67143	Special Discrepancy Work Packages	Prints packages (from 9004) in report format or in 781A format.
67144	Copy &/or Delete Batch Jobs (9029)	Provides a way to copy/delete many batch jobs (9029) at one time. Jobs can be copied from/to base/shop.
67145	Base/Aircraft TNB Listing	Produces a tail number bin report according to one of the following options: Base code or aircraft serial number.
67146	Quick Reference List/Repair Capability Report, Master Part Number Report	Reads the data base and selects a QRL number, part number, and work unit code. Data can also be selected by just numeric or non-numeric QRL numbers. Program can be used to translate a QRL number to a part number, work unit code and NSN.
67147	Aircraft Status/MDC Records	Retrieves data for all aircraft status records and then displays the applicable MDC data for the given status record. Good tool to validate MDC recorded against status jobs.
67148	Personnel/Shop Utility Program	Used to manipulate shop personnel records at base level. Can be used to transfer, merge shop mnemonics and many other utility uses. (G081 Manager use only)
67150	Maintenance Discrepancy Summary & Delayed Discrepancy Report	Lists the number of maintenance and supply "open" discrepancies by base and by aircraft according to the age of the discrepancy. This report also has an option to display the "delayed discrepancy" count and detail records.
67154	Dash 6 Report (KC135)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67155	ACMS TCTO Master Record Report	Lists data on up to ten TCTOs for selected CEIs.

Program Number	Title	Detailed Description
67157	TCTO Data Retirement	Lists TCTOs identified by the CDB as candidates for retirement since 67157 was last run. HQ AMC and San Antonio ALC run this program monthly and review the retirement candidates. Indicated TCTOs are retired unless HQ AMC or San Antonio ALC reset.
67158	Retired TCTO Report-Aircraft	Lists all TCTOs for a given aircraft which have been retired.
67159	Aircraft Inspection Due Date Report	Prints aircraft records along with their ISO, refurbishment, HSC dates. Report can be sorted in date selected order.
67161	ICMS TCTO Report	Lists outstanding TCTO estimated labor-hours and Class IV TCTOs.
67165	Aircraft Mission Capability Report	Produces a report by base, owning flight and aircraft tail number. The report depicts the status summary of each aircraft based upon the date range selected.
67168	Aircraft PEC Report	Program provides a list of flying hour records by PEC code. The list can be a detail option or a summary option.
67169	Dash 6 Report (C009)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67173	Summary of Discrepancies Closed	Produces a summary of closed discrepancies by base or work center for the past 30, 60, or 90 days.
67174	CAD/PAD Time Change Report	Provides the capability of forecasting time changes for any -6 time change.
67175	Shop Repair Cycle Asset Report	Provides a list of off-equipment discrepancies (350 tags) for each maintenance work center in squadron sequence.
67178	Semiannual Flying Hour Tracking Program	Tracks hours flown and landings per sortie for a certain aircraft identified to have a restriction due to possible structure weaknesses.
67181	Ten Year Time Change Forecast	Provides a report for any -6 time change replacement item. Selection can be for a given base or all bases. The report selects the item requested for all airframes.

Program Number	Title	Detailed Description
67184	Dash 6 Report (C005)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67187	Significant Historical Data	Prints historical data for AFTO Forms 44 and 95 items. (Request this report via program F9035)
67188	Flight Line Status Report (Batch 8020)	Lists all assigned aircraft in tail number order showing most recent flight time information.
67191	ID Listing for a Base	Selects and lists IDs for a base sorted in one of many different options.
67193	Monthly TCTO Reconciliation	Lists data codes for outstanding TCTOs which have kit, parts, or tool requirements.
67198	Dash 6 Report (C141)	Program provides a report which shows all the -6 inspection and time change items loaded for a particular aircraft or base. The report shows when an inspection or time change will be due. Many different select options are available.
67201	SAR Channel Table	Prints the SAR channel table for MADARS I or II tape processing.
67202	Raw Dump of New Format History Tapes	Dumps specified records from new format flight history tapes.
67204	Flight Segment Parameter List	Gives a second-by-second (or any other desired interval up to 3,600 seconds) listing of all trend engine and flight parameters in a simple, easy-to-read format.
67209	VGH Audit	Lists all VGH, event, MACH number, and altitude messages found in each record requested.
67212	Service Loads Recording Program (SLRP) Fatigue Analysis	Extracts SLRP data to aid in fatigue analysis.
67217	Maximum-Minimum Trend Listing	Tabulates in engineering units the maximum and minimum values of all trend point readings.
67220	Data Set Scan	Provides a record-by-record scan of the principal engine parameters and event messages.
67237	History File-Vital Information	Gives up-to-date list of all aircraft in the history file, the current engines installed on these aircraft, and the current airframe hours.
67253	MADARS Data Tape Status Listing	Provides a MADARS data tape status listing for one aircraft.
67257	JCL Listing and Card Punch	Produces JCL listings and punched cards.

Program Number	Title	Detailed Description
67259	Tape Transmission	Transmits MADARS data from the MDR tape to the CDB.
67261	SAR Channel Adder and Multiplier List	Provides a reference to the SAR channels and multipliers used in converting counts to engineering units in the maximum/minimum trend listing.
67262	Calculation of Mean and Standard Deviation from Input Array	Computes and prints mean and standard deviation from an array of less than 1,001 numbers.
67263	MDR Tape Activity Summary	Produces a weekly MLRU-SCAN log and a weekly tape transmittal log for each base. Runs automatically every morning at the CDB. Generates paperwork to keep tapes and scans flowing smoothly.
67264	Cumulative MDR Tape Activity Summary	Produces reports for cumulative data on SCAN tapes, providing transmittal log, tape error rate log, and tape activity summary.
67267	Second-by-Second Time Plot	Produces second-by-second plots of selected MADARS parameters versus time.
67270	VTOC	Selects the data set names for specified aircraft from all data sets stored, at a time of request.
67275	Data Set Index Scan	Changes or lists data set index entries. Of most interest to remote users are the base, list, and seek options.
67279	Flight Line Tape Read Program	Used by the CDB to read MDR tape mailed for evaluation.
67295	Batch VGH and Trend Plot	Plots, as function of time and record number, VGH data or a trend parameter for selected record intervals.
67296	Engine Vibration Burst Plot	This program plots, analyzes, and summarizes engine vibration data recorded by the MDR.
67308	LRU Failure/Recovery Information	Provides rapid access to LRU failure/recovery information and related data for a given data set.
67309	FSPL with Takeoff and Landing Option	Gives a second-by-second or any other desired interval up to 3600 seconds. Listing of all engine and flight parameters in a simple, easy-to-read format.
67336	New LRU Comparative Summary	Compares LRU activity for any groups of aircraft against any other groups over selected time intervals for given LRU range.
67337	Continuing Discrepancies Program	Program searches for all data sets in the comparative summary files within a specified date range, for a given aircraft and records the number of data sets, total time airborne, and total ground time covered by these data sets.

Program Number	Title	Detailed Description
67338	MDR Tape Audit of Hex Data	Scans a flight history tape and detects illegal characters.
67339	TIT Margin List, Plot, Prediction Program.	Reads the TIT margin file and plots or lists points in the file and provides predictions of future TSO.
67343	LRU Dump Program	Searches specified record interval(s) of a MDR tape and prints requested LRU information, certain event messages, and the last recorded values of altitude and MACH number prior to the LRU message.
67500	Utility Program M362/M369	Updates the shop mnemonic in the M362S22 (part number) and M369 database. (G081 Manager use only)
67501	Utility Program M361/M363/M378	Updates the shop mnemonic/work center in the M361, M363 and M378 databases. (G081 Manager use only)
67502	Utility Program M377	Updates the shop mnemonic/work center in the M377 (Support Equipment) database. (G081 Manager use only)
67508	CAMS to G081 (Personnel & Training Copy)	Accepts an input file from CAMS and updates personnel and training in G081. (Programmer use only)
67513	Program Changes	Provides a list of program changes for given program number and/or date range.
67521	Utility Program M360	Program provides a way to update the database which is normally updated by F9077 or F9077A. This program can be used to make many changes at one time. (G081 Manager use only)
67524	CAMS to G081 (TCTO Copy)	Accepts an input file from CAMS and updates aircraft & engine TCTOs in G081. (Programmer use only)
67525	CAMS to G081 (Closed Aircraft Discrepancies)	Accepts an input file from CAMS and updates the "closed" aircraft discrepancy database. (Programmer use only)
67526	CAMS to G081 (MDC)	Accepts an input file from CAMS and updates six months of MDC history. (Programmer use only)
67527	CAMS to G081 (ATO 95 History)	Accepts an input file from CAMS and updates the AFTO 95 significant history. (Programmer use only)
67812	Prints Database Schema's	This program is used to get printed copies of the G081 database schema's. There is an option available to print all databases for one input request.
67905	Retired Historical AFTO Form 44 and 95 Records	Prints 44/95 records that have been retired to non-IMS files.

Program Number	Title	Detailed Description
8001	Request for AFTO Forms 349	Produces up to nine AFTO Forms 349 for discrepancies against a particular aircraft.
8002	Job Standard Inquiry	Displays job estimate time and crew size for a particular action taken code for a work unit code.
8003	Work Unit Code History	Displays a detail or summary of WUC entered. The report will list a 1 page summary or several page detail report.
8004	MDC/WUC Analysis	Provides the user with failure data for a specific work unit code, by how malfunction code, and a summary of activity for 1 to 6 months.
8005	General Data for a Given Aircraft	Gives aircraft/engine serial/ID numbers, hours, inspection dates, times, status, and landings, etc.
8006	Scheduled Maintenance Discrepancies for a Given Aircraft	Provides the user with operational maintenance discrepancies for a particular aircraft.
8007	Base Code Table (for bases also)	Lists a report showing the bases names and their respective AFI 33-110/ICAO codes & station number (SRAN) code. An option also exists to only display "G081" bases.
8008	Expired ETJC or Stock/Part Number for Shop Jobs (AFTO Form 350, Repairable Item Processing Tags)	Produces a list of jobs with expired ETJC and jobs that will expire in the next 15 minutes.
8010	ACMS Configuration Time Report	Displays current hours/cycles, maximum hours/cycles, and the computed balance of hours/cycles for selected component serial numbers associated with a given item CEI number.
8011	In-flight Engine Shutdown	Displays the in-flight shutdown history at a particular base, or for a specific engine.
8012	MADARS Message Number/WUC Cross Reference	Displays all WUCs and nomenclature associated with a specific MADARS message number.
8013	WUC/MADARS Message Number or CEI Cross Reference	Displays all MADARS message ID numbers, CEI, and nomenclature associated with a given WUC.
8014	Action Taken Code Nomenclature	Displays action taken code nomenclature.
8015	How Malfunction Code Nomenclature	Displays how malfunction code nomenclature.
8016	General Inquiry for Files M364 through M368	Displays any record from M364 through M368 files.
8017	ACMS Configuration Index Data	Displays all component serial numbers associated with a given item CEI number.

Program Number	Title	Detailed Description
8019	SE Holding Bin Report	Display all items in TNB for all SE.
8020	Operational Status of All Aircraft at a Given Base	Displays maintenance and status information for all aircraft assigned, possessed, or transient at a given base. Provides a generation report. This program (and 8041) are unique since they can be set to display on your terminal anytime.
8021	Analysis of Most Recent Failures for a Given WUC	Displays failure data for a particular WUC over the past 1 to 6 months by aircraft, base, or fleet.
8022	Operational Status of MDS by base	Displays the AFI 21-103 mission capability status of aircraft at each base as of the time and date of inquiry.
8023	Compliance Status of a Given TCTO by Base or Force	Provides a summary of work accomplished on a specific TCTO at a given base, or for the fleet.
8024	SE Discrepancy Status	A report (AFTO Form 233, Cable Transfer Worksheet) showing the status of open support equipment discrepancies.
8025	CCMS Base/Fleet Level Report	Displays CCMS TCTO data for each base and the entire fleet.
8026	Compliance Status of a Given TCTO	Displays a summary of work accomplished on a given TCTO at a given base.
8027	TCTO Compliance History for an Aircraft	Displays the history of TCTO compliance on a particular aircraft. This program now has the combined output from program 8040 too.
8028	Aircraft Status Summary (Base/Fleet)	Lists NMCS conditions by tail number, date status started, and accumulative hours.
8029	Request for AFI 21-103 Status	Displays the AFI 21-103 conditions of aircraft possessed at a given base or command wide. The batch version of this program is 67057.
8031	Bench Check Analysis Summary for a WUC	Displays, for a given WUC, the results of all bench checks made in the past 1 to 6 months. Reflects shop action only.
8033	Inter-Terminal Message	Permits text messages to be typed in and transmitted to other G081 locations. Messages of 11 lines or less of text can be transmitted from terminal to terminal/printer.
8034	MADARS Malfunction Data for a Given WUC	Provides a listing of failures of MADARS-monitored items for the current month, the past 6 months, and total failures for all months.
8035	Event/Supply Workable Discrepancies	Selects event related or supply workable jobs for scope or printer output. Supply workable jobs are considered to be those open discrepancies having open supply records which have been filled. Many different options for selection of data are available.

Program Number	Title	Detailed Description
8036	Request for OAP Analysis History	Displays for a particular engine or GTC the details of OAP analysis.
8037	529 Summary	Utility program primarily used by DISA programmers but is open at base level for G081 managers.
8038	Aircraft Flight Status Data	Provides ability to select for one aircraft, the flying-hour data for each day flown in a selected month. A detailed option is available.
8039	Request for Supply Status	Displays the status of supply for a particular aircraft and/or for a document number.
8039A	Off-Equipment Supply Status	Displays the supply status for a component, for a particular base, shop, tag, or for a component document number.
8040	TCTO Report	Provides a list of TCTOs for a given CEI and serial number.
8041	Automated Parking Display	Displays aircraft, parking locations, and weapon system controller. The master record for each base's "plan" must be stored in program 9027 form PP records 001 & 002. G081 managers at each base must maintain this record. Any user may utilize 8041.
8042	PACER PUP / Wing Mod Report	Provides an output to the screen or printer showing scheduled input dates, complied with dates, and A/C hours for three major modifications to the C-5 aircraft.
8043	C17 Component Serial Number Status	Produces a C17 report of the next lower CEI/serial numbers.
8044	Off-Base Parts Requisition	Displays open off-base parts requisition or open supply records with an urgency justification code of 1A, 1P, 1A, 1P, or 1R (not mission capable supply).
8045	Cannibalization Data for an Aircraft or Base	Displays open cannibalization actions for an aircraft or for all aircraft assigned to a base.
8046	Top 20/47 WUC by Maintenance Labor-Hours	Displays the top 20/47 WUCs with the most labor-hours charged to them. Summary report updated monthly.
8047	Aircraft Status Change Report	Produces a status report for a single aircraft. Data can be retrieved up to 1 year. Program allows access to 30 days of data for each transaction.
8048	CCMS TCTO Report	Displays CCMS TCTO data by part number.
8049	Retired TCTO Report	Displays data for any TCTO which has been completed on all units and retired from the active files.
8050	Engine Cycle/Component Tracking	Displays all components which are linked to a given engine serial number.

Program Number	Title	Detailed Description
8051	Shop Job Close-out	Used by the shops to notify the MACC/MOC of what job control numbers have been closed by specialists. This does not close the job from the aircraft forms.
8052	Personnel Availability Forecast	Displays or prints automated data for personnel availability forecasting.
8053	AF Form, 2406 Maintenance Pre-Plan	Produces a maintenance pre-plan report which displays the time specialist required on a JCN for a given aircraft and date.
8054	Specialist Control	Produces a shop specialist control report displaying JCNs being worked at a specific base and shop for a specific shift.
8055	Personnel Status	Produces a personnel status list for each shop, shift, and date specified.
8056	Scheduled Absences for a Shop	Produces a report that indicates the absences for all individuals, or a given individual, in a shop, on a particular shift for a specific time. To update any information on this report, refer to programs 9046 and 9048.
8057	TNB List	Provides a TNB list either by base, or aircraft serial number. Reports can only be viewed for base of input.
8060	SE Status and Location	Provides a listing which displays the status and location of each SE unit selected.
8061	SE Inspection Report	Displays selected data relating to SE inspection. Data on this report is updated via G081 program 9110.
8063	Previous Seven Days Closed Discrepancies Without MDC	Displays data for previous 7 days of closed discrepancies without MDC for a shop for a given MDS or all MDSs. Running this program "daily" will ensure all discrepancies requiring MDC be listed. MDC is input via G081 program 9099.
8064	SE Off-Base Parts Requisition Status	Displays open off-base parts requisitions for a SE unit or for all SE units assigned to a base.
8066	SE Automated AFTO Forms 244/245	Displays open, closed, or all discrepancies.
8067	SE Automated Morning Report	Summarizes, in mnemonic sequence, the status of SE for a base.
8068	Aircraft Weapon Systems Status	Displays aircraft assigned to a weapon system controller assigned to the requested base.
8069	Work Center Discrepancy List	Produces a printed listing only of open, active discrepancies by work center for an aircraft or for the entire base. Also see program F9032B.

Program Number	Title	Detailed Description
8070	Closed Aircraft Discrepancies	Provides a list of closed discrepancies for a given aircraft. Many different selection options are available and the report may be viewed on the screen or sent to the printer.
8071	SE Request for Supply Status	Displays the supply status for a particular SE unit, document number, or job control number.
8072	SE Cannibalization Data	Displays open cannibalization actions for a SE unit or for all SE assigned to a base. Summary line gives total number of cannibalization actions (open and closed) and rate.
8073	Personnel Over Scheduling	Provides notification of job scheduling, personnel dispatching, and leave scheduling errors.
8074	Off Equipment AF Form 349 and 350 Print	Prints an AFTO Form 349 or 350 in the shop. This is an internal program and is not accessible by any user. It is listed here as a reference since some other G081 programs refer to it. To print a form, refer to G081 program 9128 or 9129A.
8075	TMDE Review	Provides a list of all the torque wrenches and tensiometers requiring calibration.
8076	C17 Warranty Report	Displays start & end dates of the warranty and days left in the warranty. Data is displayed for items with a CEI prefix of P7.
8077	SBSS Inquiry	Allows G081 users to inquiry the SBSS (Supply) system. Inquiries can be by NSN, Part Number, due in document number or due out document number. Output from this program is sent to printer and is not available in screen output form.
8079	Bench Stock Replenishment (SBSS)	Allows bench stock managers to request replenishment for their bins. The request automatically generates the request in the SBSS system.
8090	Aircraft Morning Report	Prints general information about the aircraft. Several options are available. Also prints specified discrepancies.
8106	TCTO Status for ACMS Components	Displays the TCTO applicability and compliance status for the given aircraft, engine, or ACMS component.
8109	Engine/APU Removal History	Displays removal history and current status for a given engine or APU.
8110	Component Serial Status and Location	Provides status and location of an engine/aircraft or serially controlled component.
8200	General Inquiry for Data Bases M359 through M363	Displays any record from M359 through M363 data bases.

Program Number	Title	Detailed Description
8201	General Inquiry for Data Bases M369 through M395	Displays any record from M369 through the M395 file (excluding the M379 data base, use 9056 for M379).
8202	Oil Change Data Report	Displays time of last oil change and date of last oil change for engines, APUs, and CSDs.

Program Number	Title	Detailed Description
9001	Input Special Discrepancy Package	Creates one or more open AFTO Form 781A type discrepancies. This data is extracted from the inputs made via program 9004. A "list" option is available.
9002	-21 Master Equipment Update	This program is updated and maintained by HQ/AMC. -21 sections at base level should use G081 program 9015.
9003	MADARS Message Number File Update	Adds, changes, or deletes a MADARS message number and nomenclature. (Use is restricted to San Antonio ALC.)
9004	Build Special Discrepancy Package	Adds, changes, or deletes discrepancy AFTO Form 349 images stored in a data base under base and type item.
9005	Aircraft Assignment Status Change (Aircraft Transfer)	Transfers aircraft records from one base to another. Transfer of assignment or possession is possible. Used also to change the assigned status code identifier.
9007	Update Work Center for Base	Adds, changes, or deletes work center data base record and its associated cross-reference record if the numeric work center has a mnemonic assigned to it. This program must be run whenever a work center is added, changed (printer LTERM or mnemonic).
9008	How Malfunction Code Update	Retrieves nomenclature for a particular How Malfunction Code. Adds, changes, or deletes a How Malfunction Code from authorized terminals at SA-ALC, OC-ALC, and HQ/AMC.
9009	Multiple Job Scheduling	Schedules/Unscheduled JCNs and requests multiple AFTO Forms 349.
9010	Discrepancy Completion	Allows a close-out to be reported against open JCNs for given JCN(s) and aircraft. This removes the job from the forms. It does nothing with the status of the MDC.
9010C	Discrepancy Completion (Non-G081)	This program is used to close a job that was completed at a NON G081 location. It allows for the input of some additional information such as corrective action. This is only used for jobs completed by people at a base that does not utilize G081.

Program Number	Title	Detailed Description
9011	Aircraft Status	Updates current date aircraft status. This program is accessed via the F9018 format. It is an internal program only.
9012	Lock/Unlock & Deploy/Undeploy Aircraft Data Records	Locks or unlocks data files for an aircraft that is assigned or possessed by a base. All engines and APUs installed on the aircraft will also be updated. Once the files are locked, they will remain so until the unlock action is executed. Also sets and resets the aircraft "deploy" indicator.
9013	AFTO Form 44 and 95 Update (Records B, C, D, E, F, and G)	Provides a scan option to look at 44/95 history records B, C, D, E, F, and G for aircraft engines. This program also allows certain terminals to update the database.
9014	ID/Serial Number Master Update	Adds, changes, and deletes ID numbers and associated data for aircraft, engine or APUs.
9015	-21 Equipment (Base Update)	-21 sections at each base must update the database daily via this program. As all bases keep the database current, it allows users to view -21 equipment world wide.
9017	Reopen or Delete Closed Discrepancies	Reopens a closed discrepancy and produces an AFTO Form 349 upon request or deletes a closed discrepancy from the file.
9018	Aircraft Arrival and Departure Update Input	Inputs aircraft arrivals/departures, and allows general maintenance status updates. It also accepts changes in aircraft status and computes and stores the history data.
9019	Identify a Repeat/Recurring Discrepancy	Sets an indicator in the open or closed discrepancy record to identify it as a repeat or recurring discrepancy. This program can be used only after the discrepancy is in the database.
9020	Flying Hour, Gear Cycle, and Engine Cycle Data Input	Allows real-time input of flying hour, landing gear, and engine cycle data. The source document for this data is AFTO Form 781, AFORM Aircrew/Mission Flight Data Document.
9021	On-Line SICR Program (Serially Controlled Items)	Adds, changes, or deletes engine and component data such as oil change, time and cycle information, location, WUC, and date of status change. Also used for other serially controlled items.
9022	Job Estimates/Special Tools and Instructions	Provides for updating job estimates by WUC and action taken code.
9023	Engine Shutdown Update	Accepts in-flight shutdown data for a given engine on a given date.

Program Number	Title	Detailed Description
9024	Engine/APU Installation and Removal Update	Accepts update information concerning all engine and APU removals and installations. Also used to adjust operating time on engines.
9025	Monthly Aircraft Status Summary	Displays aircraft status information for a selected date range and for each of the 3 months prior. Data can be selected for a given aircraft serial number, a base, or fleet totals. Use 67025 for more than 4 months of data.
9025B	Aircraft Utilization Data	This program is used to report aircraft utilization. Reports can be retrieved by aircraft, base, command, or fleet. Use 67025 for more than 4 months of data.
9026	Away from Home Station Status Change Non-Current Day Status Inputs/Corrections	Provides ability to input status changes to previous days' status or while aircraft are away from home station.
9027	G081 Notepad (local use program)	Add, scan, change, or delete a briefing report. This program is not a word processor.
9028	Load/Change of Monthly Programmed and Committed Flying Hours	Provides ability for each base to input the total base Programmed and Committed flying hours. Must be run the first of the month, each month.
9029	Batch Update and Execution	Provides the capability to update and execute JCL stored in the data base. Also used by G081 management for programming their VIRPs.
9029A	Batch Job Deadline Scheduling	Program allows batch jobs to be scheduled automatically on any day of the week or month, or 5 days a week or 7 days a week.
9031	Dash 6 Inspection Update (C005)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.
9032	AFTO Form 781A and 781K Request	Provides a method to request batch program 67061. The 67061 produces AFTO Forms 781A and 781K forms.
9032A	Aircraft Maintenance Pre-Plan Discrepancies	Provides a method to request batch program 67023. The 67023 produces a list of discrepancies for preplanning ISO inspections.
9032B	Shop Job List	Provides a method to request batch program 67087. The 67087 produces an output similar to 8069.
9032C	Repeat / Recur Report	Provides a method to request batch program 67089. The 67099 produces a list of repeat/recur discrepancies.
9032D	MACC/Expediter Report	Provides a method to request batch program 67115. The 67115 produces a list of discrepancies in aircraft and job control number sort. This program is primarily used by the MACC or an expediter.

Program Number	Title	Detailed Description
9032F	Flying Forms Request	Submits the batch program which produces a set of flying forms.
9032G	AFTO Form 781J Report	Provides a method to request batch program 67099. The 67099 produces a AFTO Form 781J.
9032T	Training Reports	Provides a method to manually submit requests for program 67094. This program has many different options available to list training status and requirements.
9033A	Dash 6 Special Inspections (C005)	Checks the -6 inspections built in the database and schedules them accordingly.
9033B	Dash 6 Special Inspections for C005	Allows "special" -6 inspections to be scheduled for a variety of different types of event occurrences.
9033C	Continuation of 9033B	Allows "special" -6 inspections to be scheduled for a variety of different types of event occurrences.
9033D	AFMC Directed Inspection for C005	Allows "special" -6 inspections to be scheduled for a variety of different types of event occurrences. Normally used for AFMC directed issues.
9033E	Schedule an Aircraft Wash for C005	Allows "special" -6 inspections to be scheduled for a variety of different types of event occurrences. Used to create wash inspections.
9034	Estimated Labor-Hours for a Job	Used by the specialist shops to update the estimated number of people/labor hours and job EDJC/ETJC for jobs assigned to their respective shop.
9035	Significant Historical Data Report (AFTO Forms 44 and 95)	Allows users to get reports of long-range history on any serially controlled item.
9036	AFTO Forms 781A for ISO/REFURB	Prints Isochronal Inspection Worksheet forms on the associated printer. This program runs a batch program internally. The output will print in approximately 5-15 minutes.
9037	Significant Historical Data Input (AFTO Forms 44 and 95)	Input significant historical data for the automated AFTO Forms 44 and 95.
9037A	AFTO Form 427, Aircraft Integral Repair Historical Record	Allows a user to enter or update the aircraft significant history file for work performed on the fuel tanks.
9037B	AMC Form 91, Nondestructive Inspection Record (NDI History Update)	Allows NDI or documentation to update any history information on nondestructive inspections.

Program Number	Title	Detailed Description
9038	Deficiency Reporting System	Provides a way for each base G081 management section to submit requests to have a G081 program added, changed, or deleted. Any user can view any suggested change via this program.
9040	Batch Discrepancy Input	Allows input of multiple discrepancies with one format.
9041	Maintenance Summary by System	Depicts the total maintenance history for the period requested by providing total actions and removals, plus the labor-hours and mean time calculations for each WUC.
9042	Aircraft Initialization	Initializes a new aircraft in the system. Allows an aircraft returning from another command to have its airframe hours and landings updated (reinitialized).
9045	Shop File Update	Establishes and/or changes the shop master data base. Use after establishing the 9007 record. Batch program 67148 must be used to transfer or delete the data.
9046	Shop Personnel Status	Provides the ability to build, update, and delete personnel records and transfer these records from one base/shop to another. Also used to search by name or employee number.
9048	Absence Scheduling/Personnel Dispatching	Provides the ability to schedule absences and dispatch personnel.
9048A	Absence Scheduling/Personnel Dispatching	Basically, the same as program 9048; however, this program was designed for and will display in-shop work.
9049	Engine and Engine Component Update	Allows the update of engine & component hours. This program is a reset from 9020. It cannot be used by the user.
9050	Input Aircraft Discrepancies	Allows maintenance jobs to be added, scheduled, or changed for a given aircraft.
9051	Program Instructions (G081 HELP PROGRAM)	Provides a means to add/change/delete/scan instructions for all programs. This is the program which should be referenced when you need HELP with another program.
9052	Composite Tool Kits	Provides a means of tracking CTK items for a shop.
9053	Engine Oil Consumption	Tracks oil consumption data for an aircraft by sortie.
9054	Card Image Input	Provides a means of inputting an 80 column card image from a terminal.
9055	Mission Symbol Update/Reports	Produces a list of all the mission symbols valid in G081. Updates made via this program are restricted to HQ/AMC.
9056	MDC Inquiry/Delete Utility	Provides a means to read the MDC database. It will also allow you to update or delete an MDC record. Note - once the MDC is passed from G081 to REMIS, any update or delete is only processed in G081.

Program Number	Title	Detailed Description
9056A	Job Inquiry/Update Utility	Provides shop chiefs the ability to correct closed jobs and corrective actions.
9056B	MDC Raw File Inquiry	Provides a display of MDC records in raw data format.
9057	User-id/LTERM Update	G081 management uses this program to establish a user's PF keys. It is also used to establish a new user in G081, to build/maintain G081 generic lterms and to link user-ids to their generic lterm, printer and base code.
9057B	Auto 8020/8041 Lterm and Option Updates	Allows you to store up to 8 lterms (user-ids) that will receive an "auto" 8020 whenever certain 9018 fields are changed. It also allows you to specify certain options and the MDS to report.
9057C	Program Security Update	Allows G081 managers to set privileges or access to certain G081 programs. Certain G081 programs are restricted to certain terminals and access keys.
9057D	Batch Job Access	There may be times which warrant a bases users be disallowed access to submitting batch jobs (9058). This program gives G081 managers the capability to turn off batch job submission via 9058 for certain job classes (stored in 9029) or all jobs classes.
9058	Shop Batch Job Execution	Displays batch jobs to be updated and/or executed by shop. Output is sent to the printer node name entered or to the default printer set by G081 management.
9059	Work Unit Code Update	Allows a WUC in G081 to be added, changed, or deleted. Item managers and HQ/AMC are the only authorized users to make updates. Any user may request a report.
9059B	C17 Reference Designator	Allows users to review the C17 WUC to reference designator cross reference. Updates are restricted to item managers.
9061	SRD Code Update/Report	Provides the ability to update SRD codes. The updates are made at HQ AMC only. Any user wishing to review or print a list of SRD codes may do so.
9062	SBSS Database Viewer	Program provides a way to review records in the SBSS log file.
9064	AFTO Form 95 (Support Equipment)	Displays and/or updates AFTO Form 95 records for Support Equipment. Engines are not updated through this program, use 9013 and/or 9037.
9065	TF39 Test Cell Data	Allows a user to input test cell data. This program will also provide a report with the TIT margin, fuel flow, core speed, and VSV and reporting occurrences of each back to a given data of TSO value.

Program Number	Title	Detailed Description
9066	Delete Obsolete CEI & Part Numbers	Allows user to delete CEI from part number record(s) and deletes all the serially tracked items related to the obsolete CEI.
9069	SE Mnemonic to Nomenclature Screen	Standardizes and tracks certain equipment mnemonics. The standard mnemonic is then used by other programs for passing data to GDSS. Users must check a list provided by this program prior to building a vehicle or SE identification number.
9070	Aircraft Delay Information Update	Tracks aircraft delays. Normally this program is used to make corrections and for reports. Adding delay data is normally not required since program 9018 automatically creates this information. Use batch program 67001 to view reports.
9071	Ramp Inspection Schedule Update	Assists AMC in controlling some of the civilian aircraft that are chartered for the military.
9071B	Ramp Inspection Schedule/Analysis Report	Creates a schedule report for a particular base or an analysis report for some particular inspecting base.
9072	User-id Associated IMS Printer Change	Displays a user's current printer and lterm setting. Allows any G081 user to update his/her own IMS associated printer.
9073	ICAO/Base Code Table Update	Program allows the ICAO/GEOLOC table to be updated. Restricted to HQ AMC & Programmer use only.
9074	Aircraft Mission Scheduling	Allows adds, changes, and deletes to the aircraft mission scheduling data base. This program will also update program 9018 when inputting an actual mission with an aircraft serial number.
9075	Daylight Savings Time Update	G081 managers at en-route locations need to run this program twice each year to start/stop daylight savings time.
9076	Aircraft Special Equipment	Allows weapon system managers to update the master aircraft record to indicate special configurations. Any user may request a list/report. Configurations can be SKE, ADS, SOLL, ICBM, GPS, JACC.
9077	8033 User-id / Printer Update Program	Displays/updates message groups for 8033 inter-terminal message. G081 management is responsible for keeping all their user-ids / printers for any 8033 base/group.
9077A	8033 User Access Privileges	Controls access to all the G081 8033 formats. Allows users to send messages to other users and to printer.
9078	Dash 6 Inspection Update (C017)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.

Program Number	Title	Detailed Description
9079A	Dash 6 Special Inspections (C017)	Checks the -6 inspections built in the database and schedules them accordingly.
9080	Dash 6 Inspection Update (KC010)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.
9081A	Dash 6 Special Inspections (KC010)	Checks the -6 inspections built in the database and schedules them accordingly.
9082	Dash 6 Inspection Update (KC135)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.
9083A	Dash 6 Special Inspections (KC135)	Checks the -6 inspections built in the database and schedules them accordingly.
9084	Dash 6 Inspection Update (C009)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.
9085A	Dash 6 Special Inspections (C009)	Checks the -6 inspections built in the database and schedules them accordingly.
9086	Dash 6 Inspection Update (C130)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.
9087A	Dash 6 Special Inspections (C130)	Checks the -6 inspections built in the database and schedules them accordingly.
9092	On-Equipment (Aircraft) Supply Program (SBSS)	Provides a means to update document numbers for aircraft supply data in G081 and/or SBSS. Used for aircraft supply information only.
9093	SBSS / G081 Interface Program	Provides the initial input capability of ordering supply in G081 and/or SBSS. This is the main program to use when initially ordering a part from SBSS, or when entering a "POST-POST" entry into G081. Also used in the "RECON" process. This program will automatically reset to 9092, 9094 or 9095 as necessary.
9094	On-Equipment (Non-Aircraft) Supply Program (SBSS)	Provides a means to update document numbers for non-aircraft supply data in G081 and/or SBSS. Used for off wing engines and AGE/Support Equipment.
9095	Off-Equipment Supply Program (SBSS)	Provides a means to update document numbers for off equipment / in shop items.
9096	SBSS Organizational Account Table	Provides a way to update printer destinations for each SBSS organization account. Will also provide a report of the data.
9097	TDAM Update/Report	Reviews and maintains the take-off TDAM file originally built by program 67027.
9098	MADARS Message Number Input	Submits failed MADARS message numbers immediately after landing. OC-ALC use only.

Program Number	Title	Detailed Description
9099	MDC Input Program	Accepts MDC (AFTO Form 349) data from maintenance shops and update files. This is a very crucial program. Many managers make decisions on the data entered via this program. Program also passes data to SBSS as necessary.
9102	Engine/Component Serialized Tracking	Provides real-time capability to remove, install, or change locations of serially-controlled components.
9103	TCTO File Initialization, Change, or Deletion	Allows input of data for initialization, change, or deletion of TCTO records for aircraft, engines, other components, and SE. This procedure restricted to HQ AMC and San Antonio ALC.
9107	Product Improvement Reporting System (PIRS)	PIRS is used to report deficiencies of airframe components.
9110	SE Inspection Update Program	To inquire, add, update, or delete the SE Inspection Record. Also used to manually create an inspection even though the inspection may not be due.
9111	SE Status/Discrepancy Update	To inquire or update the status of an SE unit or a discrepancy against an SE unit.
9112	SE General Data Update	Adds, changes or deletes SE, AGE or engines. To establish a new unit, program 9014 must be run first (9014 only applies to engines and APUs).
9113	SE Location Status Update	Builds/Updates aircraft parking locations.
9114	Pacing A/C Job	Determines earliest ETJC and pacing ETJC jobs for an aircraft. (Internal program only, no user input)
9115	SE AFTO Form 349 Print/Close	Prints AFTO Forms 349. Also allows an SE job to be closed.
9117	Minimum Daily Quantity Update and Location Report	Updates the records which contain the minimum daily requirements for Support Equipment.
9118	Training Course List/Update	Provides a means to update and/or list the standard course code table within G081. Reports may be requested by any user, however updates are restricted to HQ AMC training management.
9118B	Batch Course Code Update	Allows HQ AMC to submit a batch job which makes numerous changes to the standard course code table. Inputs are restricted to HQ AMC training management.
9119	Personnel Training Records	This program provides the capability to display training record information reports and to add, update, and delete training.
9119B	On-Base Class Scheduling	Provides a means of updating and scheduling training classes on base.

Program Number	Title	Detailed Description
9119E	Enlisted Specialty Training	Provides a means of tracking an individual through upgrade training. Tracks the start and stop dates of each CDC volume.
9119F	Off-Base Class Scheduling	Provides a means for training managers at a base to schedule off base training classes.
9120	C17 Fault Code Update	Allows update of the C017 Master Fault Codes (Usage restricted to HQ AMC and Charleston)
9121	Dash 6 Inspection Update (C141)	Establishes a -6 baseline for aircraft serial number specified and provides for updating and/or deleting that record.
9122A	Dash 6 Special Inspections (C141)	Schedules -6 inspections to be worked during an ISO, HSC, or during PDM.
9122E	Schedule an Aircraft Wash (C141)	Schedules an aircraft wash. Allows a user to pick the specific area to be washed or the entire airframe.
9123	CEI Table Update/Report	Program allows the master CEIs table to be updated. It also has several report options.
9124	Input Package of Discrepancies for Engine/SE	Takes groups or packages of discrepancies built with program 9004 and creates open jobs in the data base for SE or Engine Shop work.
9126	Base Real-Time TCTO Updates	Changes status of aircraft, engine, and component TCTOs, and updates the actual hours expended.
9127	CCMS Base Update	Updates CCMS TCTO data by base.
9128	Create Off-Equipment Jobs	Used to build, change, and transfer off-equipment jobs. AFTO Form 349 and 350 tags are created and may be printed. Program also allows TRN and DFM transactions to be "resent" to SBSS.
9129	Shop Repair Cycle Assets	Provides a report to the screen or printer showing off-equipment jobs for a particular shop. Also allows updating the data base or closing AFTO Form 350 tags.
9129A	Shop Repair Cycle Asset Update	Provides a quick means of updating without paging through program 9129. The user must know certain data elements before using this program.
9130	TMDE Maintenance Calibration	Provides for adding unscheduled maintenance jobs or changing the description of previously created jobs for TMDE.
9132	Update Part Number, WUC, and Q-List Records	Creates, changes, deletes, and displays part number, work unit code, and Q-list records.
9133	Create, Update, or Delete Mock-Up Equipment/ Schedule Calibration	Creates, changes, deletes, and displays existing test bench (mock-up) records.

Program Number	Title	Detailed Description
9135	529/DAR Updates	Allows update of certain data elements related to 529s. (Restricted to HQ AMC and Programmers)
9202	Oil Change Data Update	Updates date of last oil change and time at last oil change for engines and APUs.
9203	Automated DD Form 2026 (Oil Analysis Request)	Produces an automated DD Form 2026.

Program Number	Title	Description
\$\$CMD1	IMS Printer Control	Allows G081 managers to display the queue count for a printer. Also allows the printer to be started in IMS. When a printer is started, another print request to the printer must be requested.
BASES	Base Code Table	See program F8007.
MADIN	MADARS Input Index	Provides a list of input (9000 series) programs and titles with the capabilities of requesting a program from the list.
MADOUT	MADARS Output Index	Provides a listing of all output programs (8000 series) and titles with the capabilities of requesting a program from the list.
MESSAGE	Terminal to Terminal Message	This program provides a means of sending a 5-line message from one G081 terminal to another terminal or printer. To use this program the "lterm" must be known. Refer to F8033 for other messages.
PRINT	User-id Associated IMS Printer Change	See program 9072.
SYSAMI	System Identification	Displays the IMS system you are logged in to. No input is required, simply display the format for the information.
WHOAMI	Who Am I	Program displays the user-id and the associated node name. TO use this program enter WHOAMI on a blank screen. Ensure you enter a space after the letter I.

9019	Discrepancy	Identification of Repeat/Recurring Discrepancy
9032	Discrepancy	67061 Batch Program Request (Discrepancy List - Aircraft Forms)
9032A	Discrepancy	67023 Batch Program Request (Discrepancy List)
9032B	Discrepancy	67087 Batch Program Request (Discrepancy List/Shop Seq.)
9032C	Discrepancy	67089 Batch Program Request (Repeat/Recur Discrepancy List)
9032D	Discrepancy	67115 Batch Program Request (MACC/MOC Discrepancy List)
9040	Discrepancy	Input of Multiple Aircraft Discrepancies
9050	Discrepancy	Aircraft Discrepancy Input
9111	Discrepancy	SE Discrepancy Input & Update
9048	Dispatch	Leave/Dispatch Scheduling
67004	Distribution	Workload Distribution
67021	Distribution	Aircraft Possessed Hour Distribution
67159	Due Date	Aircraft Inspection Due Date Report
67202	Dump	Raw Dump of New Format History Tapes
67343	Dump	LRU Dump Program
9046	Employee #	Shop Personnel Record
67015	Engine	Engine Removals or Shutdowns

Program Number	Key Word in Context	Generic Discription
67018	Engine	Engine/Component TCTO Report
67030	Engine	Input of OAP Data
67046	Engine	Aircraft and Engine TCTO Status
67096	Engine	Engine Cycle Report
67125	Engine	Engine Status
67127	Engine	TCTO History Listing
67237	Engine	History File-Vital Information
67296	Engine	Engine Vibration Burst Plot
8005	Engine	General Data for a Given Aircraft
8011	Engine	In-flight Engine Shutdown
8036	Engine	Request for OAP Analysis History
8040	Engine	TCTO Report
8050	Engine	Engine Cycles/Component Tracking
9014	Engine	Aircraft/Engine/APU ID Number Assignment/Change/Transfer
9023	Engine	Engine Shutdown Update
9024	Engine	Engine/APU Installation & Removal Update
9053	Engine	Engine Oil Consumption
9102	Engine	Engine Component Serialized Tracking
9124	Engine	Input Packages of Discrepancies for Engines/SE
9020	Engine Cycles	Flying-Hour/Gear Cycle/Engine Cycle Data Input
8109	Engine/APU	Engine/APU Removal History
9002	Equipment	Dash 21 Equipment Master Update
67132	Error	SBSS Error Report
67263	Error	MDR Tape Activity Summary
67161	Estimate	ICMS TCTO Report (Estimated Hours)
9034	Estimate	Estimated Labor-Hours
8002	Estimated Time	Job Standard Inquiry (Personnel/Hours)
8008	ETJC	Expired ETJC or Stock/Part Number for Shop Jobs
9032D	Expeditor	67115 Batch Program Request (Discrepancy List MACC/Expeditor.)
67130	Expired	TCTO Expiration Status Report
67010	Failure	Highest Work Unit Code Listing (Failures)
67065	Failure	High 25 Failures and Labor Hour Report

Program Number	Key Word in Context	Generic Discription
67129	Failure	WUC Removals/Failures
67308	Failure	LRU Failure/Recovery Information
8003	Failure	MDC Analysis by How Malfunction
8004	Failure	MDC / Work Unit Code Analysis
8021	Failure	Analysis of Most Recent Failures for a Given WUC
67212	Fatigue	SLRP Fatigue Analysis
67337	Fault Code	Fault Code Discrepancy
9120	Fault Code	C17 Fault Code Update
67110	Feedback	Discrepancy Search and Print Batch Program
9045	File	Shop File Update
67076	Fix	Aircraft Fix and Break Rate
67035	Fleet	Aircraft Flying Hours
67038	Fleet	Cannibalization Data Summary
67112	Fleet	Operational Status of C-5 Fleet
67204	Flight	Flight Segment Parameter List
67279	Flight	Flightline Tape Read Program
67309	Flight	FSPL With Takeoff and Landing Option
67188	Flightline	Aircraft Flightline Status Report (Batch 8020)
67034	Fly Hours	Flying Hour Data Audit List
67035	Fly Hours	Aircraft Flying Hours
67099	Fly Hours	Automated AFTO Form 781J
67168	Fly Hours	Aircraft Flying Time PEC Report
67178	Fly Hours	Semi-annual Flying Hour Tracking Program
8038	Fly Hours	Aircraft Flight Status Data
9020	Fly Hours	Flying-Hour/Gear Cycle/Engine Cycle Data Input
9028	Fly Hours	Monthly Programmed and Committed Flying Hours
9032F	Flying Forms	Batch Program Request (Aircraft Forms)
8022	Force	Operational Status of the Fleet
67055	Forecast	Dash 6 Report (C130)
67094	Forecast	Personnel Training Forecast
